1️⃣ Adding Text in Premiere Pro

Steps:

1. Select the **Type Tool (T)** from the toolbar.
2. Click anywhere on the Program Monitor and type your text.
3. Go to the **Essential Graphics Panel (Window → Essential Graphics)**.
4. Customize your text — font, size, color, alignment, spacing, etc.

Shortcut:

- **Ctrl + T (Cmd + T)** → Add a new text layer directly.

✨ 2️⃣ Basic Text Controls (Essential Graphics Panel)

Option	Purpose
Font Family / Style	Choose the typeface and bold/italic styles.
Size	Adjust how big your text appears.
Fill	Change text color.
Stroke	Add outline around text.
Shadow	Adds depth and visibility.
Background	Add a solid or transparent color box behind text.
Tracking / Leading	Adjust spacing between letters or lines.
Alignment Tools	Align text to screen center (very useful).

🧭 3️⃣ Positioning Text

- Use **Effect Controls → Motion → Position** to move text.
- **Anchor Point** determines where motion (rotation/scale) happens from.

  👉 Example: Move anchor to bottom for smooth “pop-up” effects.

Pro Tip:

✅ Always center text using the **Align and Transform** options for professional symmetry.

🎞️ 4️⃣ Animate Text with Keyframes

Keyframes make your text move, fade, or change over time.

Common Animations:

Animation	Effect Control to Use	How It Works
Fade In / Out	Opacity	Keyframe from 0% → 100% for fade-in.
Slide In / Out	Position	Move text from off-screen → to position.
Zoom In / Out	Scale	Keyframe from 0% → 100%.
Rotate Text	Rotation	Add rotation for spin-in/out effects.
Pop Animation	Scale (with Ease Out)	Makes text pop like a bounce.

🌀 5️⃣ Types of Easing (for smooth motion)

Use easing to make movement look natural — not robotic.

Easing Type	Effect
Ease In	Starts slow, ends fast (good for exit).
Ease Out	Starts fast, ends smooth (good for entry).
Ease In & Out	Smooth on both ends — best for titles.

How: Right-click keyframe → Temporal Interpolation → Ease In/Out.

💡 6️⃣ Creative Text Animation Ideas

🎬 1. Typewriter Effect

- Animate **Opacity** one letter at a time or use **Crop Mask**.
- Add *keyboard click* SFX for realism.

🎬 2. Slide-In Lower Thirds

- Text slides in from left/right with Ease Out.

- Add background shape → animate together.

🎬 **3. Bounce Text**

- Scale from 0 → 120% → 100%.
- Gives playful energy — good for intros.

🎬 **4. Mask Reveal**

- Use rectangle mask over text → animate mask path to reveal text.
- Looks professional and cinematic.

🎬 **5. Glow / Flicker Titles**

- Add *Glow Effect* or *Brightness keyframes* → flicker glow style.

🎬 **6. Tracking Animation**

- Animate **Tracking (letter spacing)** for stretch or spread effect.

🎨 7️⃣ Text Styles and Mood

Mood	Font Style	Animation Type
Professional / Corporate	Sans-serif (Montserrat, Lato)	Fade-in, Slide-in smooth
Cinematic / Dramatic	Serif (Cinzel, Playfair)	Slow fade, zoom-in
Modern / Tech	Geometric (Poppins, Roboto)	Slide or glitch effect
Fun / Vlog Style	Handwritten (Pacifico, Comic Neue)	Bounce or pop-in

---

🔧 8️⃣ Pro Tips

1️⃣ Keep text within **title-safe area** (check Safe Margins: Ctrl + ').

2️⃣ Use **contrast colors** — text should stand out from the background.

3️⃣ Avoid too many fonts — max 2 styles per video.

4️⃣ Use **Drop Shadow** for readability on bright backgrounds.

5️⃣ Time animations with **beats or transitions** in music.

6️⃣ For consistent branding, **save as preset** → right-click → Save Preset.

7️⃣ Preview animations in **1/2 playback quality** for smoother workflow.

🌈 9️⃣ Useful Effects for Text Animation

Effect	Use
Transform	Add motion blur during movement.
Directional Blur	Smooth slide-ins.
Gaussian Blur	Text fade or soft transitions.
VR Glow / Lens Flare	Cinematic titles.
Wave Warp	Wavy or distorted text.
Turbulent Displace	Glitchy distortion effects.
