🌈 1️⃣ What Is Color Theory?

Color theory is the **science and art of using colors** — it helps editors and designers choose color combinations that look **pleasing, balanced, and emotional**.

In short: it's how colors make people *feel* and *react*.

🧠 2️⃣ Basic Color Types

Type	Description	Example
Primary Colors	Base colors that can't be made by mixing others	🔴 Red, 🟡 Yellow, 🔵 Blue
Secondary Colors	Made by mixing two primary colors	🟠 Orange, 🟢 Green, 🟣 Purple
Tertiary Colors	Mix of a primary + secondary	Red-Orange, Yellow-Green, etc.

🎨 3️⃣ Color Wheel Combinations (Schemes)

Scheme	Meaning	Example	Usage
Complementary	Opposite colors on the wheel	Blue & Orange	High contrast → action, gaming
Analogous	Colors next to each other	Blue, Teal, Green	Calm, cinematic look
Triadic	3 evenly spaced colors	Red, Blue, Yellow	Playful, balanced style
Monochromatic	Same hue, different shades	Light Blue → Dark Blue	Clean, modern design
Split Complementary	Base + 2 neighbors of its opposite	Blue + Red-Orange + Yellow-Orange	Balanced contrast

---

💭 4️⃣ Color Psychology (What Colors Mean)

Color	Emotion / Message	Common Use
🔴 Red	Energy, Passion, Urgency	Sale banners, Action scenes
🟠 Orange	Warmth, Excitement	Fun, energetic brands
🟡 Yellow	Happiness, Attention	Highlights, cheerful mood
🟢 Green	Growth, Calm, Nature	Health, finance, nature
🔵 Blue	Trust, Calmness	Tech, corporate, travel
🟣 Purple	Luxury, Creativity	Beauty, royalty, mystery
⚫ Black	Power, Elegance	Fashion, cinematic tone
⚪ White	Clean, Simplicity	Minimal, modern, purity
🌸 Pink	Love, Softness	Romantic, friendly tone

🪄 5️⃣ Practical Video Editing Rules

1. **Use 2–3 colors max** for a clean design.
2. **Contrast = Attention** → dark background + bright text.
3. **Warm colors** (Red, Orange, Yellow) = Excitement.
4. **Cool colors** (Blue, Green, Purple) = Calm or serious.
5. Keep **brand color consistency** in all your edits.
6. Use **neutral colors (white, black, gray)** to balance bold tones.

🎯 6️⃣ Color Grading in Premiere Pro

Step	Tool	Purpose
1. Basic Correction	Lumetri Color Panel	Adjust exposure, white balance
2. Creative Look	LUTs or Creative Tab	Apply stylized tone
3. Curves	RGB Curves	Fine-tune highlights & shadows
4. Color Wheels	Shadows / Midtones / Highlights	Adjust cinematic tones
5. Vignette	Vignette Tab	Focus viewer's attention

🧩 7️⃣ Quick Tips to Remember

- 🎬 **Blue & Orange = Cinematic combo** (common in films).
- 🧡 **Warm + Cool mix = Balanced energy**.
- ⚡ **Saturation control** = Too much color distracts viewers.
- 🕶️ **Color affects emotion faster than visuals or text.**
